Life/form® Adult Venipuncture and Injection Training Arm

Teach venipuncture and injection techniques including starting IVs and introducing Over the Needle IV catheters. Realistic feeling of puncture through the vinyl skin and latex veins. The skin actually rolls as you palpate the vein and the characteristic "pop" can be felt as the needle penetrates the vein. Veins are accessible at the antecubital fossa, along the forearm, and at the back of the hand. Practice of intramuscular injection is equally realistic. A foam pad simulates muscle tissue, and the boundaries are identified by natural bonelike landmarks.

Includes:

- Life/form® Arm with skin
- Blood donor and infusion sets
- 3cc syringe, 12cc syringe, and needle
- 1 pint Life/form® Blood
- Teaching guide, and hard carrying case
- Size: 35" x 12" x 6"
- 3-Year Manufacturer's Warranty

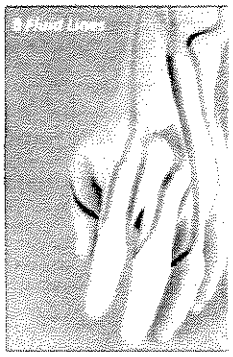
Life/form® Realism



NASCO

Life/form® Advanced Venipuncture Injection Arm

Provides complete venous access for IV therapy and phlebotomy, plus sites for intramuscular and intradermal injections. An extensive 8-line vascular system allows students to practice venipuncture at all primary and secondary locations, includingstarting IVs and introducing Over the Needle IV Catheters. The venous system simplifies setup with only one external fluid bag supplying artificial blood to all veins simultaneously. The dorsal surface of the hand includes injectable metacarpal, digital, and thumb veins. The antecubital fossa includes the median cephalic, median basilic, and median cubital veins. Venipuncture can also be performed along the basilic, cephalic, accessory cephalic, and median antebrachial veins. Intramuscular injections may be performed in the deltoid muscle and intradermal injection sites are located in the upper arm. Intramuscular injections into the deltoid muscle are enhanced by the soft, life-like skin and by the natural bony landmarks in the region. Intradermal injections using distilled water will create characteristic skin welts at designated sites on the upper arm. The soft, flexible fingers are molded separately with extreme attention paid to every detail — right down to the fingerprints! Flexion of the wrist helps students develop manipulation skills. The replaceable skin rolls as the veins are palpated, and a discernable "pop" is felt when entering the veins. The Life/form® molding process reproduces the fine detail of the skin to make the arm look and feel alive. Valve in the veins can be seen and palpated on the skin surface. Under normal use, hundreds of injections may be performed before the veins or skins need to be replaced

Includes:

- Life/form® Advanced Venipuncture and Injection Arm
- 2qts simulated blood
- 3cc syringe, 12cc syringe, and needle
- Two fluid bags, instruction manual, and carrying case
- 3-Year Manufacturer's Warranty

PERFORMANCE SYSTEMS

Intraosseous Anatomical Training Leg Ad

Intraosseous Anatomical Training Leg Adult complete with skin and cartridge, allows students to understand the proper landmarks and placement of the intraosseous device. The cartridge is comparable to the density and texture of actual bone marrow and is located under a sheath of latex which acts as the skin on the training leg. Clinical Specialists have practiced on pediatric training years, and with this new adult trainer, students can use this durable leg during training and practicals. This anatomical leg is designed with a palpable tibia tuberosity and can be used with any I.O. device for placement

- Weight 4.5 lbs
- Dimensions 9.84 x 6.3 x 25.88 in

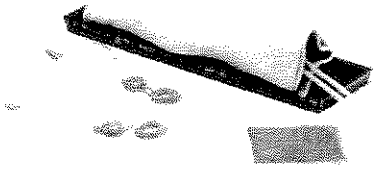
SIMULAIDS

IV Training Arm & Hand

Master the venipuncture technique with these special training devices. The student can palpate the supple, resilient, realistic arm and hand, then withdraw from vein or inject fluid. 17612 and 17613 include blood powder and carrying tray.



ITEM#	SPECS	MFR#	EACH
17612	Arm	146	259.00
17613	Hand	147R	259.00
57004	IV Arm Replacement Skin	142	46.19
